

ECOCIVIX AI — FEATURE MAP

Pre-Hackathon Planning Document

1. Core MVP — Citizen

- Authentication
- Report civic/environmental/safety issue
- Title and description
- Optional image
- Location
- AI analysis
- Issue status
- Issue timeline
- Resolution tracking

2. Core MVP — AI

- Category classification
- Priority classification
- Short summary
- Responsible department/action area
- Environmental impact
- Safety relevance/risk
- Suggested action
- Structured output validation
- Failure/fallback handling

3. Core MVP — Admin

- Dashboard
- Issue search
- Issue filters
- Issue details
- AI analysis review
- Assignment
- Status updates
- Activity updates

- Resolution/closure

4. Intelligence

- Issue distribution
- Priority distribution
- Environmental patterns
- Safety-related clusters
- Geographic issue markers
- Community hotspots

5. Nice-to-Have

- Multilingual reporting
- Image-based issue understanding
- More advanced geospatial analytics
- Public transparency view
- Recurring issue detection
- Sustainability recommendations

6. Future Scope

- Authority integrations
- Larger community datasets
- Advanced environmental analytics
- Community participation mechanisms
- Advanced geospatial intelligence

7. Explicitly Out of Scope for Initial Build

- Facial recognition
- Crime prediction
- Advanced real-time surveillance
- Guaranteed emergency response
- Unsupported environmental calculations
- Unrelated social-media features
- Generic chatbot disconnected from the core workflow

8. Scope Rule

If the core product is not reliable, do not add optional features.
