

ECOCIVIX AI — HACKATHON MVP SCOPE

Pre-Hackathon Planning Document

1. MVP Goal

Demonstrate one complete, reliable end-to-end community intelligence workflow.

2. Must Work

Citizen: authentication, report creation, AI analysis, tracking, timeline.

AI: category, priority, summary, department, environmental impact, safety relevance, suggested action.

Admin: dashboard, search/filter, details, assignment, status update, resolution.

Intelligence: real issue distribution and a meaningful map/hotspot view if time permits.

3. Demonstration Flow

```
Create realistic report
→ AI analyzes it
→ issue appears in admin
→ admin acts
→ citizen sees update
→ intelligence view reflects real data
```

4. Priority Order

1. Core functionality
2. Integration
3. Reliability
4. Security
5. Testing
6. UX
7. Performance
8. Visual polish
9. Optional features

5. Feature Freeze Rule

Once the core demo works, prioritize fixing bugs, improving UX and rehearsing rather than continuously adding features.

6. Scope Protection

A feature should be added during the hackathon only when it clearly improves the core product and can be implemented, integrated and tested within the remaining time.
